Presented by: Assemblymember Peterson
Introduced: 04/03/89
Drafted by: Juneau Energy Advisory Committee

RESOLUTION OF THE CITY AND BOROUGH OF JUNEAU, ALASKA

Serial No. 1374

A RESOLUTION REGARDING THE INCLUSION OF ENERGY CONSERVATION FEATURES IN THE DESIGN AND CONSTRUCTION OF MUNICIPAL FACILITIES.

WHEREAS, the City and Borough of Juneau has amended the building code for residential structures to include minimum thermal standards (energy conservation measures), and

WHEREAS, municipal and commercial buildings are not subject to the minimum thermal standards in the building code, and

WHEREAS, the city and borough needs to set an example for the community in constructing energy efficient buildings, and

WHEREAS, the operating costs of city and borough buildings and facilities constitute a very significant portion of the city and borough operating budget, and

WHEREAS, efficient use of renewable and nonrenewable resources will help keep costs of the local government down for both current and future Juneau residents;

NOW, THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE CITY AND BOROUGH OF JUNEAU, ALASKA:

1. That the preliminary project scope for city and borough capital improvement projects will include cost estimates for energy conservation features whenever a new facility, addition, or remodeling project is proposed. The energy conservation feature will be evaluated on the basis of whether the feature can produce a five-year energy conservation payback. The Assembly will determine if the energy conservation feature will be funded as part of the proposed CIP project.

2. The Juneau Energy Advisory Committee will review the projects in the six-year CIP program to assure that energy conservation features are included. The energy conservation features will be evaluated in accordance with paragraph 1 above.

3. Effective Date. This resolution shall be effective immediately upon adoption.

Adopted this 15th day of May, 1989.

Mayor
