Eaglecrest Ski Area

155 Heritage Way, Juneau AK 99801

RE: Sole Source Information

Rocky Mountain Lift Services has offered Eaglecrest Ski Area Zurbruegg clamp plates and pulley blocks, and a Habegger Hit cable and hoist. We are North America's sole supplier for both these product lines from Switzerland.

Zurbruegg Switzerland manufactures technically specialized clamps and pulleys for the safe detensioning of wire ropes (haul ropes) on ski lifts and other ropeways. The clamps customized round rope groove is matched to the rope diameter, ensuring gentle and efficient clamping. This is the best prerequisite for secure guying to safely work on the detensioned ski lift. The pulley blocks are also technically sophisticated and are both robust and weight-optimized. They are available as standard or customized for capacities from 6 to 120 tons. The role of the pulley block is to lift and move heavy loads, change the direction of a pulling force, and reduce the amount of force needed to perform these tasks.

Habegger Switzerland (a division of Jakob AG) manufactures the Hit cable hoist. When heavy loads have to be moved safely and cost-effectively, original Habegger products are the first choice. All HIT wire rope hoists are based on the same functional principle: A wire rope of any length is guided through two pairs of clamping jaws in a straight line. When the drive lever is moved back and forth, the wire is moved forwards or backwards (according to the selection) smoothly and without slippage. From the small and lightweight HIT-06 over the powerful yet compact allrounder HIT-16 up to the HIT-32 powerhouse with a pulling force in excess of 3 tonnes, the manual hoists are versatile and cover a range of uses.

Please contact us if you have questions or need more information.

Kind regards

D. Gould
