RE: **Situational Update –Level 2 Moderate** - Operational Period 21 (9/3/2020 – 9/17/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
Level 2 Moderate	Community spread based cases are occurring at an increasing rate.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.	

Situation Assessment: We are experiencing a high volume of new cases, a significant number of which are attributed to community spread. Our 14 day case rate indicator is at the moderate alert level and our 7 day case rate indicator is in the high alert level. The community is urged to take appropriate cautions.

Issues of Note:

The EOC has worked to increase operational capacity to handle a large number of requested tests as a result of asking individuals who have socialized in bars during the last 14 days to be tested. Additional drop in testing will be available at Centennial Hall on Friday, Saturday and Sunday from 9:00 am to 5:00 pm. BRH is assisting by supplementing CBJ staff for this operation.

Daily Numbers Report:

We had 3 new cases today: 2 secondary transmission and 1 community spread. The secondary transmission are not associated with the cases tied back to the large social gathering/bars.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	36	178	1	215
Non Resident	1	97	0	98
Total	37	275	1	313

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

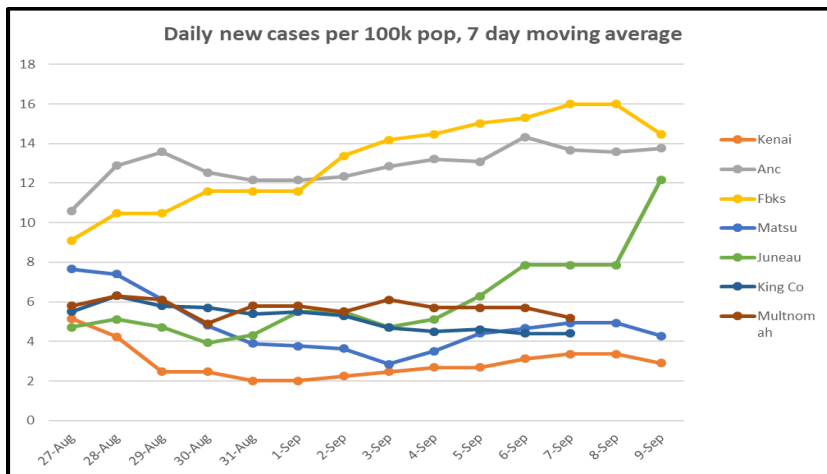

There are 3 new resident and no nonresident cases reported for Juneau today. CBJ continues to show a higher number of resident and nonresident cases than what is reported on the state dashboard. In addition,

our recovered numbers continue to be larger than what is being reported by the state. Both discrepancies are due to more timely local reporting.

The State of Alaska is reporting 66 new cases today bringing the statewide cumulative case count to 6,790.

Testing:

158 test results were received ranging in collection dates from 9/3/2020 – 9/6/2020. This is a 2 – 5 day turnaround time with 131 of the tests returning in the 2 – 3 day range.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
