RE: Situational Update – Level 3 High - Operational Period 25 (10/29/2020-11/12/2020)

**Situational Assessment:** Our 7 and 14 day case rate indicators are in the very high alert level range. The disease is traveling within two distinct clusters as well as family groupings. Contact tracing is impaired due to caseload statewide and the nature of contacts required. Residents must take appropriate cautions, including limiting social bubbles to immediate family members.

**Issues of Note:**
The Governor issued an emergency declaration on Thursday. The requests articulated in the declaration mirror those that are currently in effect in our community. In accordance with the Governor’s request, we will maintain our High Alert level through the end of November and reevaluate at that time.

Cases are climbing around the state – today DHSS reported 641 new cases. Anchorage hospitals are near capacity and we are tracking that closely to understand the impact on local ability to medevac.

**Daily Numbers Report:**
We are reporting 11 new cases today. The State dashboard is reporting the same number of overall resident cases but still lagging in the report of nonresident cases.

</tr>
</tbody>
</table>

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.
Disease Transmission/Contact Tracing:
We are reporting 11 new resident cases and no new nonresident cases today. The increase in cases comes from the statewide report. Disease acquisition will be reported tomorrow.

The State of Alaska is reporting 654 new cases today bringing the statewide cumulative case count to 23,814.

Testing: We will report test data on Monday

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (https://globalepidemics.org/key-metrics-for-covid-suppression/) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website.
