DATE: December 25, 2020

TO: CBJ Assembly

FROM: Mila Cosgrove, Incident Commander

Situation Assessment: Our 14 day case rate remains at the High alert level and our 7 day case rate has bumped to the Very High alert level. The disease is moving across all disease acquisition types: secondary infection, travel and community. Travel related cases are climbing. Residents must take appropriate cautions, including limiting social bubbles to immediate family members. The public should strictly adhere to all health orders related to travel.

Issues of Note:
There are no significant issues of note to report today.

The State of Alaska did not update the COVID dashboard today due to the Christmas Holiday.

Daily Numbers Report:

<table>
<thead>
<tr>
<th>Category</th>
<th>Active</th>
<th>Recovered</th>
<th>Deceased</th>
<th>Cumulative</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resident</td>
<td>49</td>
<td>876</td>
<td>5</td>
<td>930</td>
</tr>
<tr>
<td>Non Resident</td>
<td>0</td>
<td>117</td>
<td>0</td>
<td>117</td>
</tr>
<tr>
<td>Total</td>
<td>49</td>
<td>993</td>
<td>5</td>
<td>1047</td>
</tr>
</tbody>
</table>

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:
Nothing new to report

Testing: Testing data will be reported on Monday December 28th.
This data will be updated again on December 26th.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (https://globalepidemics.org/key-metrics-for-covid-suppression/) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website.
