**Situation Assessment:** Our 14 day case rate indicators is at the High alert level and our 7 day case rate indicator has dropped to the Moderate alert level. The disease continues to move across all disease acquisition types: community spread, secondary transmission, and travel. A more aggressive strain of COVID-19 has been identified in Alaska. We caution the public to strictly adhere to all health orders related to travel and to continue strict adherence to masking and social distancing when outside your immediate home.

**Issues of Note:**

Vaccine updates: 22.5% of the Juneau population age 16 and above have been vaccinated with 15.0% of the population having received their 2nd dose.

The second vaccine clinic – POD2(a) began today and will continue tomorrow. We anticipate vaccinating 1,000 individuals over the course of the two day clinic. The 2nd dose clinic will be March 4 – 5. Vaccination of homebound seniors occurs next week.

The State of Alaska today updated its eligibility guidelines for the COVID-19 vaccine. The next tier includes:

- People aged 50 years or above with a high-risk medical condition;
- People 50 years or above working as a frontline essential worker;
- Pre K-12 and child care education staff; and
- People living or working in other congregate settings.

We are working on estimating the size of this tier, however there are 6,666 people in the community who are between the ages of 50 and 65.

**Daily Numbers Report:**

We are reporting 1 new case today.

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard.

Disease Transmission/Contact Tracing:
We are reporting 1 new resident case no new nonresident cases today. The new case is under investigation. The Wildflower Court cluster remains at 12 positives with 10 recovered. All cases at Wildflower Court are asymptomatic.

The State is reporting 145 new cases today bringing the statewide cumulative total to 56,252 cases.

Testing: Please note: We are in the process of determining how to report out airport testing with the conversion of operations to Capstone.

2/10/21: 79 test results were received from the Fulgent Lab with collection dates between 02/08/2021 – 02/09/2021 – 19 tests returned in 1 day and 60 tests returned in 2 days.
This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (https://globalepidemics.org/key-metrics-for-covid-suppression/) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website.
