Subject: Juneau water contingency plan

Good Afternoon,

I have been talking with the public works guys from the water dept and I know you have as well regarding production and maintenance issues. Last week I sent notice to all the ships that a restriction is probable and have 3 ships that are on a priority list for water in Juneau. These are ships that MUST receive water here. The good news is that we will not have a complete shut out unless it is much worse than anticipated. When there is a need to restrict water we have worked out the following plan which we will implement but may need your assistance to regulate:

Plan A: Initial restriction of one hose per ship

Plan B: One ship only at a time based on priority need – we will post a schedule

Should a restriction occur I plan to notify the ships on a daily basis through general notice but also in the daily confirmation message. Let me know if you have any concerns.

Best regards,

Drew Green
