Subject: URGENT: Juneau Fresh WATER Shut-off

Good Evening,

Bad news from the city's water department –

The port of Juneau has been shut-off from receiving water in Juneau this weekend and perhaps Monday. There is increased consumption for water in Juneau and not enough production. Our additional downtown water supply that was used for cruise ships the past week is being pumped to the valley as their reservoirs are below minimums.

The good news is that our main downtown water source is still not usable but the lab results are looking better every day. We hope that this problem will be resolved soon. I will let everyone know once our main reservoir is back on-line. For the weekend however, we are out of luck for water. Please make water or take on additional water in other ports as needed/available.

If there are any changes to this information I will let you know immediately.

Best regards,

Drew Green

Juneau Port Manager
