RE: **Situational Update –Level 2 Moderate** - Operational Period 19 (8/6/2020 - 8/20/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity
Level 2 Moderate	Outbreaks are ongoing but controlled. Community spread based cases are occurring at low rates.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Contact tracing is constrained statewide, but local investigations are being conducted in a timely manner.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	23	87	1	111
Non Resident	8	65	0	73
Total	31	152	1	184

Note: CBJ EOC data may be leading the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Issues of Note:

The community continues to experience a steady uptick in cases which maintains our moderate risk assessment. Over the last 14 days, disease has been acquired primarily through secondary transmission, mostly stemming from family type gatherings. Travel remains a critical risk factor. Low level community spread is consistently present. The EOC continues to monitor the situation closely to determine if cases will escalate.

CBJ distributed 7900 cloth face coverings at community distribution events last Thursday and Friday.

The UnCruise vessel sailed from port this morning bound for the shipyard in Seattle. The individual who tested positive and the other 5 people who were identified as close contacts remained quarantined in town. The remainder of the guests were cleared by Public Health to come out of quarantine.

Disease Transmission/Contact Tracing:

4 resident and 1 nonresident cases reported for Juneau today. DPH is reporting that the majority of new cases reported today are secondary transmission amongst individuals they were following. They are reporting 80 PUIs associated with the active cases.

Testing:

Test results continue to come in generally in the 3 – 5 day range. No test results were returned yesterday due to state lab closures on Sunday.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and is generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website.
