 RE: **Situational Update –Level 2 Moderate** - Operational Period 19 (8/6/2020 - 8/20/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity
<b>Level 2 Moderate</b>	Outbreaks are ongoing but controlled. Community spread based cases are occurring at low rates.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Contact tracing is constrained statewide, but local investigations are being conducted in a timely manner.

Complete CBJ COVID-19 Dashboard and be found [here](#) or by going to [Juneau.org/COVID-19](http://Juneau.org/COVID-19)

**Situation Assessment:** We continue to experience a steady uptick in cases and while our new 7 and 14 day case rate indicators have elevated into the high category, we maintain a moderate risk assessment due to the contained nature of the outbreaks.

There are 5-6 distinct groupings of cases over the previous 14 days. Kensington and AGS are approximately ½ of our case count during this period. In addition, there are also several large family groupings that are contributing to the strong upward trend.

Family-gathering type events continue to be a major source of transmission in the community and the community is urged to be cautious about keeping their social bubble small.

Cases associated with travel and community spread continue as well but at lower numbers.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	39	109	1	149
Non Resident	17	74	0	91
<b>Total</b>	<b>56</b>	<b>183</b>	<b>1</b>	<b>240</b>

Note: CBJ EOC data may be leading the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

**Issues of Note:**

Kensington: Kensington has 26 confirmed positives among their workforce. Covid positive individuals and close contacts are isolating in a secure location. Testing continues.

The AGS outbreak appears mostly contained at this point. The last round of testing was completely negative. They will conduct some additional testing to make sure there is no additional positive cases.

Disease Transmission/Contact Tracing:

There are 6 new cases reported for Juneau today. The cases are secondary transmission though a couple remain under investigation.

The State of Alaska is reporting 50 new cases today bringing the statewide cumulative case count to 5,110.

Testing:

106 Total tests were received yesterday, ranging in collection dates from the 8/10 – 8/12. (3 – 6 days after the samples were collected.) 88 of the tests were from August 10<sup>th</sup> – 3 days out.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and is generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website

Alaskan information is for residents only. We are working on a chart that combines resident and nonresident case averages.
