 RE: **Situational Update –Level 2 Moderate** - Operational Period 20 (8/20/2020 - 9/3/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity
Level 2 Moderate	Outbreaks are ongoing but controlled. Community spread based cases are occurring at low rates.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.

The Complete CBJ COVID-19 Dashboard can be found [here](#) or by going to [Juneau.org/COVID-19](#)

Situation Assessment: We continue to experience a steady number of new cases. Our 14 day case rate indicator has reduced to the moderate level and the 7 day indicator has dropped back to minimal as the cases associated with several of our outbreaks begin to fall outside of the designated time frames.

Issues of Note:

There are a number of questions about the new CDC guidance on not testing asymptomatic close contacts. We do not anticipate that will change our testing protocols or numbers.

The EOC continues to track changes in the testing environment particularly as it relates to reliable Antigen testing. More on this as it develops.

We had a Community Update today. There were approximately 20 people on Zoom during the session and Facebook is showing 1,000 views. The next session is scheduled for Tuesday, September 1st at 5:00 pm. In addition to the update on COVID numbers in the community, Sarah Hargrave will be on with us to talk about contact tracing.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	16	152	1	169
Non Resident	2	94	0	96
Total	18	246	1	265

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

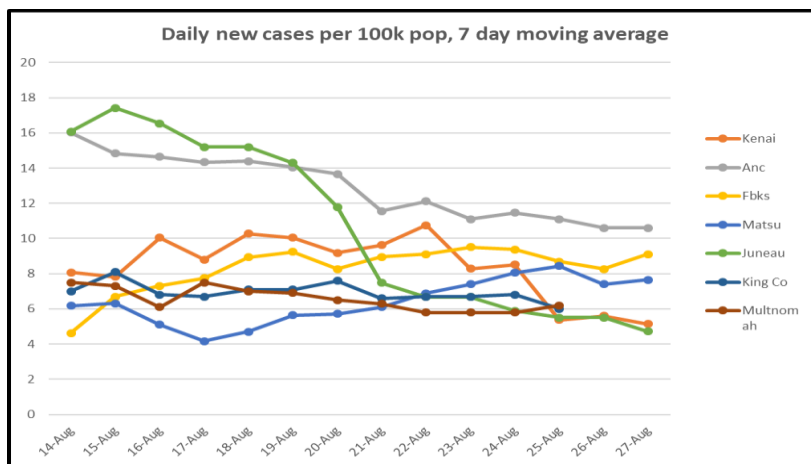

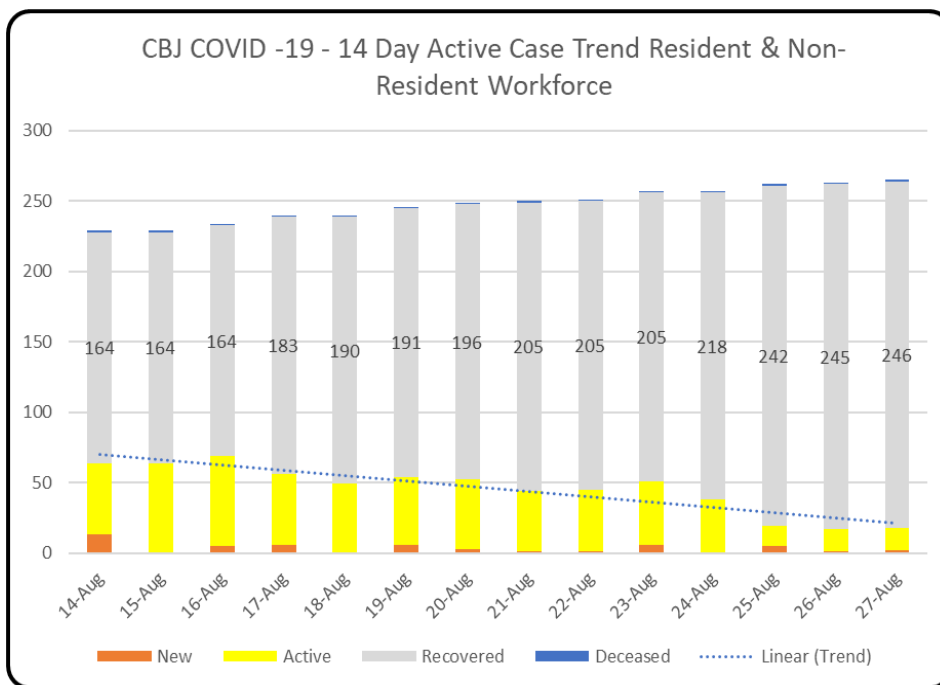

Disease Transmission/Contact Tracing:

There are 2 new cases reported for Juneau today and a total of 46 PUIs that DPH is tracking. CBJ continues to lead the state dashboard numbers in reported cases. In addition, our recovered numbers continue to be larger than what is being reported by the state due to more timely local reporting.

The State of Alaska is reporting 86 new cases today bringing the statewide cumulative case count to 5,801.

Testing:

62 test results were received ranging in collection dates from 8/17/2020 – 8/24/2020. This span includes test returns between 2 – 9 days. The majority of returns were spread in time from 3 – 5 days. There was a single test returned at the 9 day mark.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website

Beginning 8/20/2020, Alaskan data includes resident and non resident cases.
