 RE: **Situational Update –Level 2 Moderate** - Operational Period 20 (8/20/2020 - 9/3/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
Level 2 Moderate	Community spread based cases are occurring at an increasing rate.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.	

Situation Assessment: We continue to experience a steady number of new cases, a significant proportion of which are attributed to community spread. Our 7 and 14 day case rate indicators are in the moderate level and our larger outbreaks have resolved.

Issues of Note:

The Kensington Mine and other family group outbreaks have resolved.

We continue to experience a decline in passengers arriving at the airport. There is a chart at the end of the report that provides trends over time.

BRH has a new COVID positive admission.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	21	159	1	181
Non Resident	2	94	0	96
Total	23	253	1	277

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

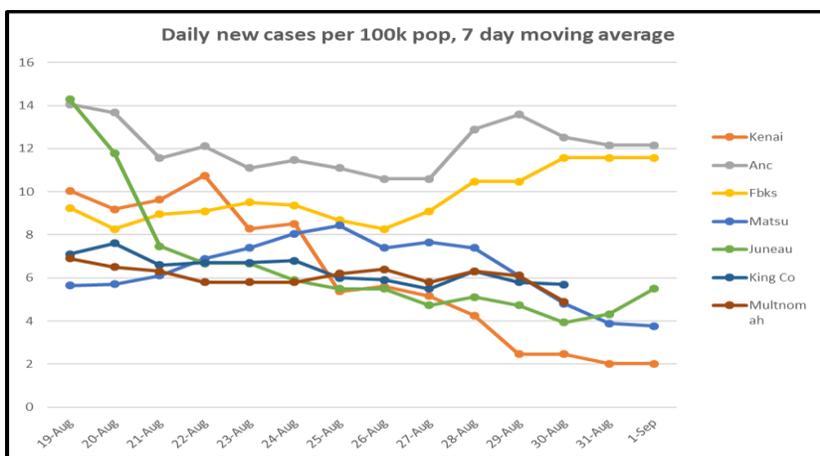

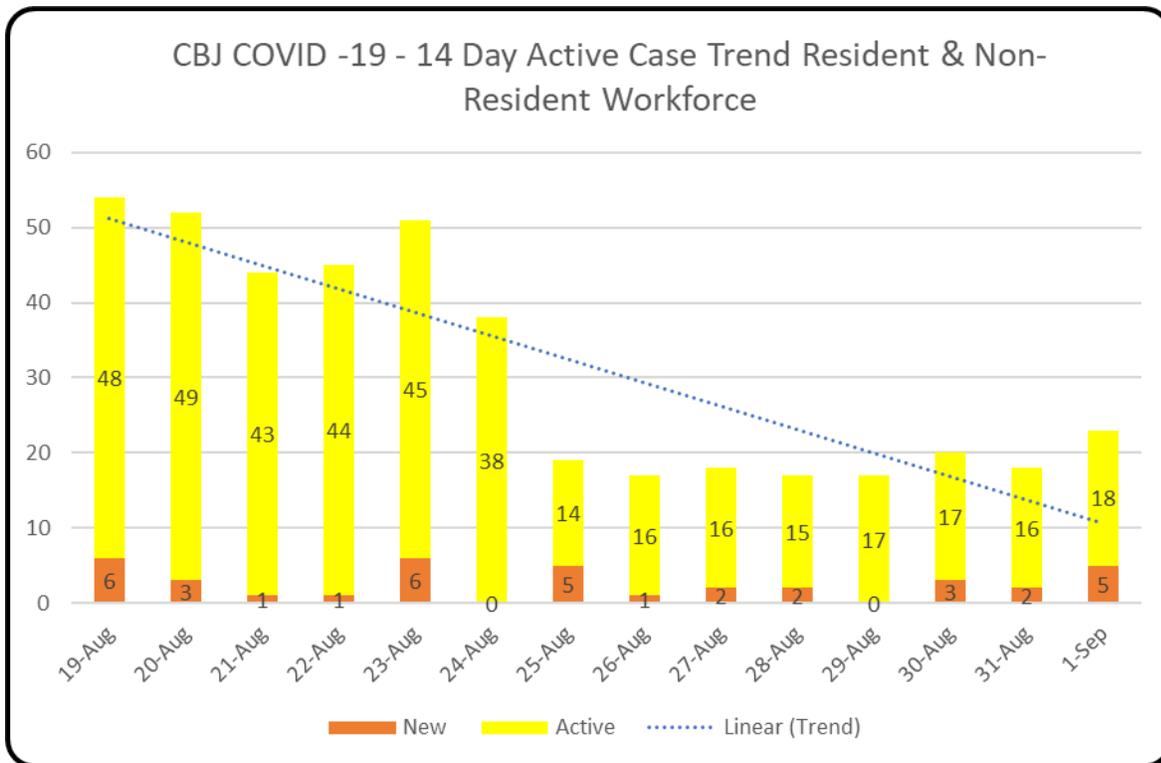

There are 5 new resident cases reported for Juneau today. 3 of the active resident cases are not physically in Juneau. CBJ continues to show a higher number of nonresident cases than what is reported on the state

dashboard. In addition, our recovered numbers continue to be larger than what is being reported by the state. Both discrepancies are due to more timely local reporting.

The State of Alaska is reporting 36 new cases today bringing the statewide cumulative case count to 6,160.

Testing:

We did not receive any test results on Monday. The State lab is closed on Sundays.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website

Beginning 8/20/2020, Alaskan data includes resident and non resident cases.
