 RE: **Situational Update –Level 2 Moderate** - Operational Period 21 (9/3/2020 – 9/17/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
Level 2 Moderate	Community spread based cases are occurring at an increasing rate.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.	

Situation Assessment: We are experiencing a high volume of new cases, a significant number of which are attributed to community spread. Our 14 day case rate indicator is at the moderate alert level and our 7 day case rate indicator is in the high alert level. The community is urged to take appropriate cautions.

Issues of Note:

There was a soft opening for the drop in testing at Centennial Hall today. Operations went smoothly and we are ready for the full standup of operations on Friday, Saturday and Sunday from 9:00 am to 5:00 pm. BRH and Public Health Nursing are assisting by supplementing CBJ staff for this operation. We've also pulled in our Community Paramedicine team so in home testing will be limited over the weekend.

Airport travel numbers are presented in a graph at the end of this report.

Daily Numbers Report:

We had 4 new cases today: 2 cases associated with the large gathering/bar activity and 2 under investigation.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	35	182	1	219
Non Resident	1	97	0	98
Total	36	279	1	317

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

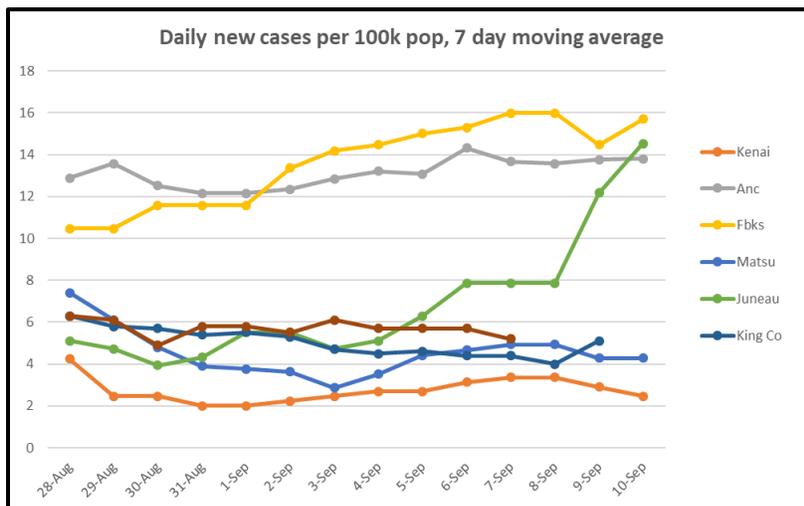

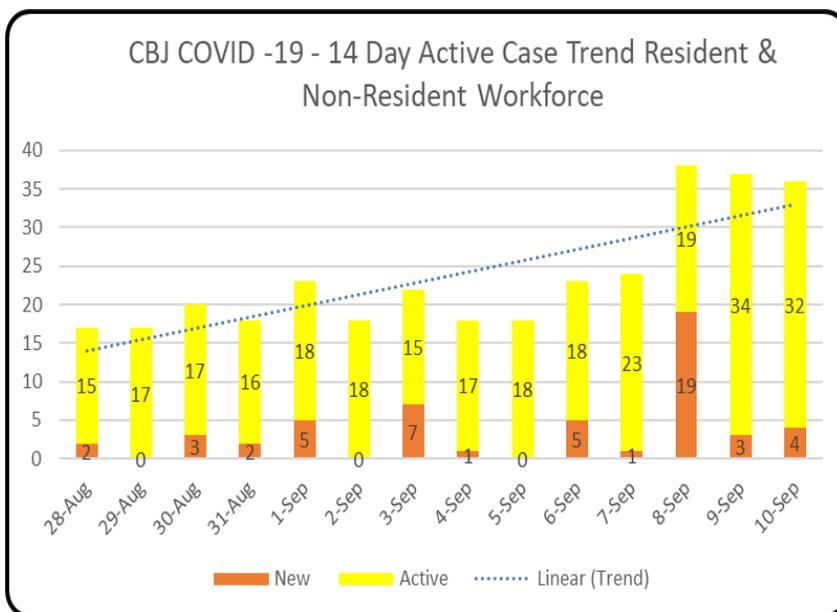

Disease Transmission/Contact Tracing:

There are 4 new resident and no nonresident cases reported for Juneau today. CBJ continues to show a higher number of resident and nonresident cases than what is reported on the state dashboard. In addition, our recovered numbers continue to be larger than what is being reported by the state. Both discrepancies are due to more timely local reporting.

The State of Alaska is reporting 112 new cases today bringing the statewide cumulative case count to 6,915.

Testing:

113 test results were received ranging in collection dates from 8/30/2020 – 9/7/2020. This represents a 2 – 10 day turnaround timeframe though there is a single outlier at the 10 day mark, one at 5 days and the rest were returned in the 2 – 3 day range.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
