RE: **Situational Update –Level 3 High** - Operational Period 22 (9/17/2020 – 10/1/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity
<b>Level 3 High</b>	Community spread based cases are occurring at an increasing rate.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.

**The Complete CBJ  
COVID-19  
Dashboard can be  
found [here](#) or by  
going to [Juneau.org/  
COVID-19](#)**

**Situation Assessment:** We are experiencing a high volume of new cases, a significant number of which are attributed to community spread. Our 14 day and 7 day case rate indicators are at the high alert level. The community is urged to take appropriate cautions and in particular to refrain from indoor, unmasked activities with individuals outside of family/social bubbles

**Issues of Note:**

Test results continue to come in at a steady rate. We are waiting on approximately another 75 to come in from Sunday testing.

We continue to show positives from the social event/bar outbreak. There are 37 total positives associated with this cluster so far.

The two individuals with COVID-19 reported yesterday are inmates at Lemon Creek Correctional Center in Juneau. They were recently admitted to the facility and tested for COVID-19 while in quarantine as part of LCCC's screening process. Neither individual had contact with the general population of inmates. Both individuals are currently in isolation. Public Health is in the process of conducting contact investigations. No LCCC staff are identified as close contacts.

We are doing a round of testing at the Glory Hall tonight during the dinner delivery service.

### Daily Numbers Report:

We are reporting 9 new cases today.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	43	221	1	265
Non Resident	0	98	0	98
<b>Total</b>	<b>43</b>	<b>319</b>	<b>1</b>	<b>363</b>

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

### Disease Transmission/Contact Tracing:

There are 9 new resident and no nonresident cases reported for Juneau today. Of the cases reported today, 5 are secondary transmission and 4 are under investigation. One of the secondary transmission cases is associated with the large social gathering/bar cluster bringing the total count up to 37 cases.

The state dashboard is showing lower numbers for both resident and nonresident cases than what is reported on the CBJ dashboard. In addition, our recovered numbers continue to be larger than what is being reported by the state. This is due to the timing of reporting. CBJ numbers are more accurate.

The State of Alaska is reporting 112 new cases today bringing the statewide cumulative case count to 7,587.

### Testing:

18 test results were received collected on 9/12/2020. This is a 5 day turnaround time.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
