 RE: **Situational Update –Level 3 High** - Operational Period 22 (9/17/2020 – 10/1/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity
Level 3 High	Community spread based cases are occurring at an increasing rate.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.

The Complete CBJ COVID-19 Dashboard can be found [here](#) or by going to Juneau.org/COVID-19

Situation Assessment: We are experiencing a high volume of new cases, a significant number of which are attributed to community spread. Our 14 day case rate indicator remains at the high alert level and our 7 day case rate indicator has moved to the moderate alert level. The community is urged to take appropriate cautions and in particular to refrain from indoor, unmasked activities with individuals outside of family/social bubbles

Issues of Note:

Testing will occur tomorrow at Housing First, the AWARE shelter, and Glory Hall during evening meal delivery. Test results will likely return by Tuesday.

The positive cases associated with the social gathering/bar cluster are slowing down. The total number of cases is up to 41.

There continues to be a higher percentage of community spread cases occurring than what we have seen in the past. We are monitoring the situation and continuing at Level 3 until we have a better feel for whether the case count will jump again.

Daily Numbers Report:

We are reporting 3 new cases today.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	29	252	1	282
Non Resident	0	98	0	98
Total	29	350	1	380

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

There are 3 new residents and no nonresident cases reported for Juneau today. The cases are under investigation. Of the 4 cases yesterday, 1 was designated community spread, 1 is secondary, and 2 are travel. The 2 travel cases are from individuals who are Juneau residents but not physically present in the community.

The state dashboard is showing a lower number of resident cases and nonresident cases than what is reported on the CBJ dashboard. In addition, our recovered numbers continue to be larger than what is being reported by the state. This is due to the timing of reporting. CBJ numbers are more accurate.

The State of Alaska is reporting 142 new cases today bringing the statewide cumulative case count to 8,081.

Testing:

170 test results were received with collection dates between 9/18/2020 – 9/21/2020. This represents a 2 – 5 day turnaround time. Tests returned evenly spread across the time frame.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
