RE: **Situational Update –Level 2 Moderate** - Operational Period 23 (10/1/2020 – 10/15/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	<b>The Complete CBJ COVID-19 Dashboard can be found <a href="#">here</a> or by going to <a href="#">Juneau.org/COVID-19</a></b>
<b>Level 2 Moderate</b>	Community spread based cases are occurring.	Hospital capacity is good and the general situation at the hospital is stable.	The testing environment is stabilizing. Local investigations are being conducted in a timely manner.	

**Situation Assessment:** Our overall number of positive cases has dropped off compared to previous weeks. Both our 14 day case rate and 7 day case rate indicators have reduced to the moderate level. There is still community spread happening in the community and, as a result, people are urged to take appropriate cautions and in particular to refrain from indoor, unmasked activities with individuals outside of family/social bubbles.

**Issues of Note:**

Juneau has a new death attributed to COVID-19 today. The death of the individual was reported several weeks ago has been attributed to COVID-19. It is our understanding that the death will be reported on the State website tomorrow.

**Daily Numbers Report:**

We are reporting 2 new cases today.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	25	276	2	303
Non Resident	2	98	0	100
<b>Total</b>	<b>27</b>	<b>374</b>	<b>2</b>	<b>403</b>

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

**Disease Transmission/Contact Tracing:**

There are 2 new residents and no new nonresident cases reported for Juneau today. Both cases are community spread.

The state dashboard is showing a lower number of resident cases and nonresident cases than what is reported on the CBJ dashboard. In addition, our recovered numbers continue to be larger than what is being reported by the state. This is due to the timing of reporting. CBJ numbers are more accurate.

The State of Alaska is reporting 132 new cases today bringing the statewide cumulative case count to 9,040.

Testing:

190 test results were received with collection dates between 9/25/2020 – 9/29/2020. This represents a turnaround time of 2 – 6 days. The majority of tests returned at the 3 - 4 day mark, not tests returned at the 5 day mark, and only one test at the 6 day mark.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
