

CCC Update October 2020

Horse Tram Trail

- 1.36 miles of muddy trail hardened with gravel
- 1900' of GeoCell Ground retention structure utilized to combat deep blue-clay mud
- Approximately 400 yds of gravel used

Anne Coleman Beach Access Trail

- Improved drainage from road causing entire trail to be muddy
- Hardened 700' of trail
- 5 yards of gravel used

Granite Creek Trail

- Improved 1.48 miles of trail
- Installed 330' of boardwalk using recycled and new materials
- Built 37 drainage structures
- Re-routed sections of trail that had been too eroded to recover
- Dug drainage ditches to improve future drainage issues

Red Mill Trail

- 1.1 miles of trail tread improved
- 27 log water bar structures removed and replaced with sustainable drainage controls
- Portions of trail were rerouted where necessary
- Native gravel was harvested and used to fill turnpike structures over muddy areas
- Built 64 drainage structures

EVC Ropes Course Trail

- 1100' of slippery rotten boardwalk removed
- Currently being replaced with hardened gravel trail
- Approximately 60yds of gravel

EVC Cabin Trail

- Crews currently hardening 700' of access trail to cabin
- Approximately 80 yds of gravel

EVC Elevated Walkway Replacement

- Planning in progress

Training

- 136 hours per crewmember of job skills training
- Trainings include: Trail Design and Layout, Safe Rigging Practices for Trail work, Wilderness Advanced First Aid, Basic Chainsaw Operation, Trail Mix Orientation and Basic Trail Skills

Eaglecrest CCC Summer 2020 Accomplishments and Additional Funding Request

The Eaglecrest Summer Trail Crew has had a very successful summer with the two significant trail construction projects nearing completion and many other trail maintenance projects completed around the mountain. Eaglecrest contributed shot rock from an onsite material source that was developed through the Eaglecrest CIP program. With all of the trail projects combined together the crew has spread an approximate total of 3100 cubic yards of material into project areas.

Dicks Lake Trail

The Dicks Lake Trail was a pedestrian focused trail constructed with a total length of 1750 feet. This trail is located at the top of the Black Bear Chair lift. The views from this location are breath taking. In the future, this trail will make construction of a second cabin site possible. The crew hauled in 250 cubic yards of shot rock to complete this project.

Mountain Bike Trail Project

The other trail construction project that the crew worked on throughout the summer is creation of the downhill flow trail from the top of the Hooter chairlift to the base of the mountain. The trail segments currently completed have been getting a lot of increased usage by all ages of riders. During recent weekends, Eaglecrest staff have counted an average of forty mountain bike riders per day visiting the mountain. The upper trail section has jumps and large swooping berms. The lower section is more beginner oriented with smaller banked corners and gentle rollers that gives mountain bikers a similar feeling to skiing and snowboarding. The crew used 1800 cubic yards of rock to harden the trail and build the features into the trail tread. The crew also spread approximately 500 yards of recycled asphalt to top coat the mountain bike trail making it the premier downhill mountain bike trail in Juneau.
