# RE: Situational Update –Level 3 High- Operational Period 25 (10/29/2020- 11/12/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	The Complete CBJ
Level 3 - High	Community spread based cases are occurring at an increasing rate and the unsheltered/vulnerable population cluster is growing.	The hospital case load is stable.	Contact tracing efforts are constrained due to the nature and volume of cases.	COVID-19 Dashboard can be found <u>here</u> or by going to Juneau.org/ COVID-19

**Situation Assessment:** Our overall number of positive cases are climbing compared to previous weeks. Our 7 and 14 day case rate indicators are in the very high alert level range. The disease is transferring within the unsheltered cluster and by community spread among other populations, and contact tracing is impaired due to caseloads and the nature of contacts required. Residents must take appropriate cautions, including limiting social bubbles to immediate family members.

## Issues of Note:

None noted.

## **Daily Numbers Report:**

We are reporting no new cases today. Public Health does not report updated numbers over the weekend. Reported numbers below still exceed the state dashboard numbers.

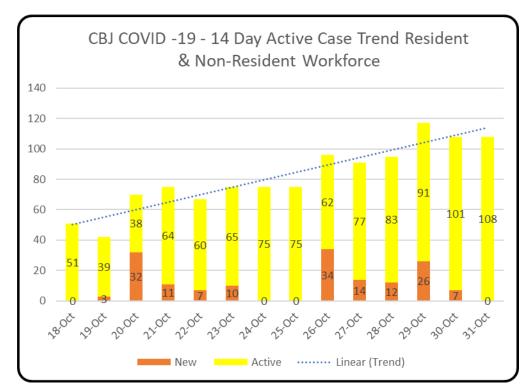

COVID-19 In Juneau						
	Active	Recovered	Deceased	Cumulative		
Resident	105	410	3	518		
Non Resident	3	102	0	105		
Total	108	512	3	623		

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

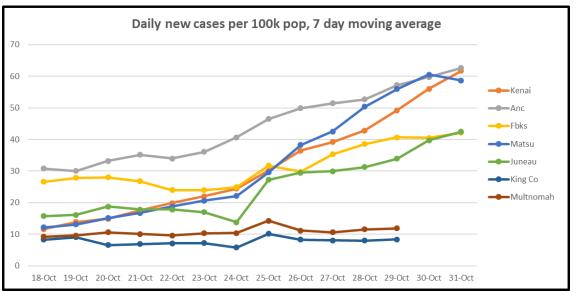

#### Disease Transmission/Contact Tracing:

The State of Alaska is reporting 447 new cases today bringing the statewide cumulative case count to 16,355.

#### October 31, 2020 Assembly EOC Update CBJ COVID-19 Response

<u>Testing:</u> Test results will be updated on Monday.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<u>https://globalepidemics.org/key-metrics-for-covid-suppression/</u>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
