 RE: **Situational Update –Level 3 High-** Operational Period 25 (10/29/2020- 11/12/2020)

Level 3 - High	Community spread based cases continue to occur. The containment situation is improving but remains uncertain.	The hospital case load is stable.	Contact tracing efforts are constrained due to the nature and volume of cases.	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
-----------------------	---	-----------------------------------	--	--

Situation Assessment: Our 7 and 14 day case rate indicators are in the very high alert level range. The disease is traveling within two distinct clusters as well as family groupings. Contact tracing is impaired due to caseload statewide and the nature of contacts required. Residents must take appropriate cautions, including limiting social bubbles to immediate family members.

Issues of Note:

We are reporting one new death today. The individual who died passed away out of state and had not lived in Juneau for some period of time. Their next of kin is a Juneau resident.

Daily Numbers Report:

We are reporting 1 new case today (see info above). Local Public Health did not report numbers today due to the holiday. Local case numbers are still reporting ahead of the state dashboard.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	71	543	4	618
Non Resident	1	105	0	106
Total	72	648	4	724

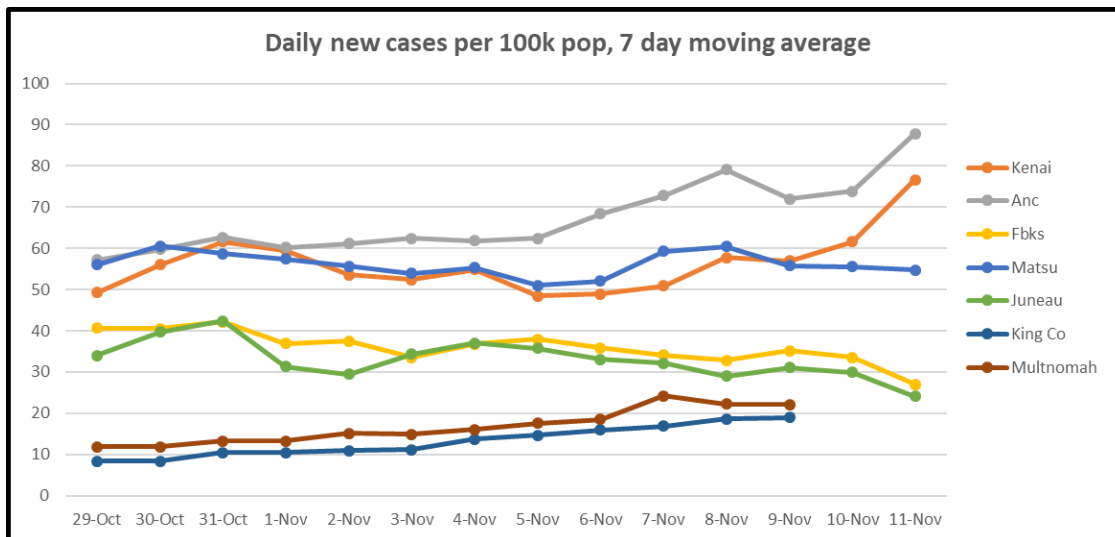

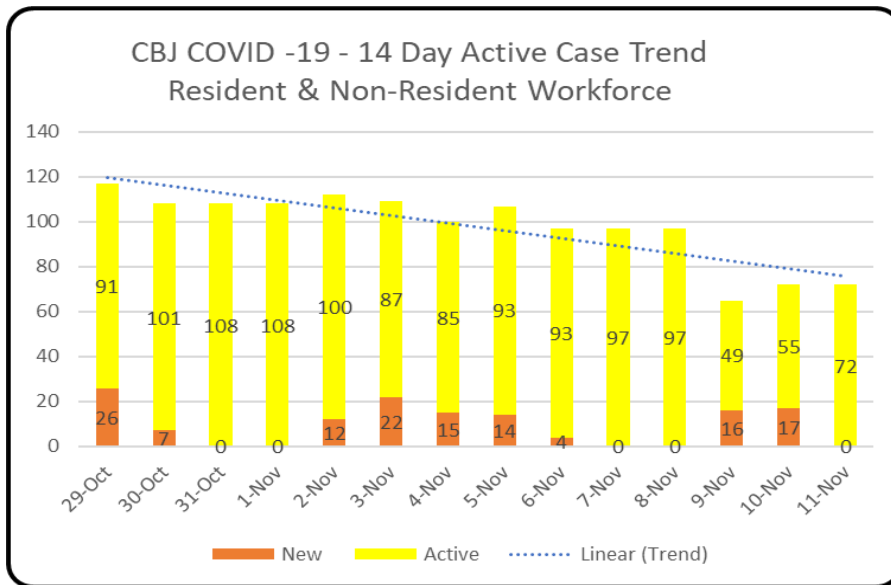

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

We are reporting 1 new resident case today. The individual was not in Juneau when COVID was contracted.

The State of Alaska is reporting 493 new cases today bringing the statewide cumulative case count to 21,331. Case counts in Anchorage, Kenai Peninsula Borough, and Mat-Su Borough continue to climb driving overall numbers up.

Testing: Due to the holiday, test results will be reported tomorrow.

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
