 RE: **Situational Update –Level 3 High-** Operational Period 25 (10/29/2020- 11/12/2020)

Level 3 - High	Community spread based cases continue to occur. The containment situation is improving but remains uncertain.	The hospital case load is stable.	Contact tracing efforts are constrained due to the nature and volume of cases.	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
-----------------------	---	-----------------------------------	--	--

Situation Assessment: Our 7 and 14 day case rate indicators are in the very high alert level range. The disease is traveling within two distinct clusters as well as family groupings. Contact tracing is impaired due to caseload statewide and the nature of contacts required. Residents must take appropriate cautions, including limiting social bubbles to immediate family members.

Issues of Note:

The Governor issued an emergency declaration on Thursday. The requests articulated in the declaration mirror those that are currently in effect in our community. In accordance with the Governor's request, we will maintain our High Alert level through the end of November and reevaluate at that time.

Cases are climbing around the state – today DHSS reported 745 new cases. Anchorage hospitals are near capacity and we are tracking that closely to understand the impact on local ability to medevac.

Daily Numbers Report:

We are not reporting any new cases today. Local public health doesn't update numbers over the weekend and we are still ahead of the numbers being reported on the State dashboard.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	83	554	4	641
Non Resident	2	106	0	108
Total	85	660	4	749

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

We do not get updated numbers from local public health over the weekend.

The State of Alaska is reporting 745 new cases today bringing the statewide cumulative case count to 23,153.

Testing: We will report test data on Monday

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
