 FROM: Mila Cosgrove, Incident Commander
 RE: **Situational Update –Level 3 High-** Operational Period 27 (12/3/2020 – 12/31/2020)

Overall Community Risk	Disease Situation	Hospital Capacity	Public Health Capacity	The Complete CBJ COVID-19 Dashboard can be found here or by going to Juneau.org/COVID-19
Level 3 - High	Community spread based cases continue to occur. The containment situation remains uncertain.	The hospital case load is stable.	Contact tracing efforts are constrained due to the nature and volume of cases.	

Situation Assessment: Our 14 day and 7 day case rates have dropped to the High alert level. The disease is moving across all disease acquisition types: secondary infection, travel and community. Travel related cases are climbing. Residents must take appropriate cautions, including limiting social bubbles to immediate family members. The public should strictly adhere to all health orders related to travel.

Issues of Note:

The Roche machine is installed and operational for training purposes. Staff training is underway followed by validation. We are still targeting mid to end of January for operation. Roche has also confirmed that they can provide reagent to test 960 per week. We are working to determine when we may be able to get more than that.

The state just received a shipment of Moderna vaccine. Juneau's portion is expected to be about 400 doses. These will be earmarked for the last portion of Phase 1a and should be distributed to health care workers in the "catch all" group which includes anyone working in health care with regular patient exposure.

Daily Numbers Report:

We are reporting 12 new cases today.

COVID-19 In Juneau				
	Active	Recovered	Deceased	Cumulative
Resident	44	873	5	922
Non Resident	0	117	0	117
Total	44	990	5	1039

Note: CBJ EOC data may differ from the data reported on the State of Alaska dashboard due to lags in data entry on the state level.

Disease Transmission/Contact Tracing:

We are reporting 12 new resident and no new nonresident cases today. 4 are secondary transmission and the remaining cases are under investigation.

The State of Alaska is reporting 429 new cases today bringing the statewide cumulative case count to 44,463.

Testing: 12/21/20: 40 test results were received from the Fulgent Lab with collection dates between 12/18/2020 – 12/19/2020, returning results to individuals 2-3 days after collection

This chart tracks the number of new cases in the past 7 days, controlled for population. King County (Seattle) and Multnomah County (Portland) are included for context and due to travel frequency. The source data for Alaska is from the SOA dashboard. Out of state data is from the Harvard Global Health Institute (<https://globalepidemics.org/key-metrics-for-covid-suppression/>) and generally lags a day behind most of our other reporting. Policy recommendations at varying levels (<1, <10, <25, 25+) can be found on their website
