Subject: objection to removal of airport eagle nest

As someone who flies several times a year, with family and friends who fly almost weekly, I have a very personal vested interest in airport safety and the issue of bird strikes.

But birdstrikes are a wildlife management problem, not an airplane management problem. I want to know that wildlife experts and the Wildlife Hazards Working Group concur with whatever action the airport management takes on this matter. To avoid potentially catastrophic crashes, please give their advice the greatest consideration in making your decision about what to do with the eagle nest and the surrounding woodlands, including the island by the float plane ponds.

Sincerely,
Lesley M. Lyman
