

How high is the Juneau Douglas Bridge?

Referencing Ocean Grafix Chart 17315 vertical clearance is 51' at Mean High Water (MHW).

Vessels must pass under the bridge in order to access Harris Boat Harbor, Aurora Boat Harbor, and Wayside Park ADA Boarding Float. The outside boundary of the navigation channel under the bridge is marked by red lights. The center of the navigation channel is marked by green lights. A navigation clearance gauge is installed on a bridge pylon on the west side of the navigation channel. The gauge shows the height from the water surface to the highest point from the water to the concrete box channel support.

The information above is not intended to relieve a vessel master and operator from the responsibility to use sound judgment, but to provide information to mariners.
