¹Status

- C – Candidate vulnerability A species for which the Service has on file sufficient information on biological and threat(s) to support proposals as threatened or endangered
- T – Threatened throughout all or a significant portion of its range. A species which is likely to become endangered within the foreseeable future
- E – Endangered A species which is in danger of extinction throughout all or a significant portion its range.

As of August 15, 2011, the Alaska Department of Fish and Game (ADF&G) no longer maintains a Species of Special Concern list. The list has not been reviewed and revised since 1998 and it is out of date and no longer considered valid. Since that time, the Department has completed Alaska's Wildlife Action Plan that is supported through the State Wildlife Grant program. See the Wildlife Action Plan to view the species-focused plan.

ADF&G currently uses the Alaska Wildlife Action Plan to assess the needs of species with conservation concerns, and to prioritize conservation actions and research.
