Asbestos Survey Requirement

Alaska regulations require owners, operators, contractors, and other persons who undertake certain demolition or renovation activities to ensure that an accredited asbestos inspector performs a thorough asbestos survey of the building or residence, or part of the building or residence, where the demolition or renovation operations will occur. This requirement does not apply if the demolition or renovation activities qualify for one of the exemptions listed below. If none of the exemptions apply, Waste Management requires that the customer or contractor delivering demolition or renovation wastes to a Waste Management facility for transfer, recycling, or disposal must provide a copy of the asbestos survey to Waste Management prior to or at the time of delivery.

Important Definitions. In particular, the following definitions are relevant:

- "Asbestos" means the asbestiform varieties of serpentine (chrysotile), riebeckite (crocidolite), cummingtonite-grunerite (amosite), anthophyllite, actinolite, and tremolite.
- "Asbestos-containing material" or "ACM" means any material containing more than one-percent asbestos by weight.
- "Demolition" means the wrecking or removal of any load-supporting structural member of a facility together with any related handling operations or the intentional burning of any facility.
- "Renovation" means altering in any way one or more facility components. Operations in which load-supporting structural members are wrecked or removed are excluded.

In the section below, please mark whether an asbestos survey is attached or, if not, what exemption applies to the demolition or renovation project.

Asbestos Survey Attached

If an asbestos survey is attached, please check the appropriate box below.

- No Asbestos Found.** The attached asbestos survey states that **no** ACM (including non-friable ACM) was found or removed from the demolition or renovation project.
- Asbestos Found.** The waste materials delivered to the WM Disposal Facility identified above do **not** contain any ACM (including non-friable ACM) identified in the asbestos survey, **and** all ACM (including non-friable ACM) has been or will be sent to a permitted ACM disposal facility or otherwise managed in accordance with all applicable laws and regulations.

Project Exempt from Asbestos Survey Requirement (check all that apply)

- New Construction-Only Project.** Materials were generated from a new construction project not involving demolition or renovation work.
- Owner-Occupied Residential Demolition Project.** The materials were generated from a demolition project conducted inside a private residence that is occupied by the owner and the owner occupant performed the demolition work.
- Small Residential Renovation Project.** The materials were generated from renovation activities at residential buildings with four or fewer dwelling units.
- Post-2004 Small Residential Demolition Project.** The materials were generated from demolition activities at residential buildings with four or fewer dwelling units that were constructed after January 1, 1980.
- DEQ Waiver for Residential Buildings.** The materials were generated from the demolition of residential buildings for which DEQ issued a written approval waiving the asbestos survey requirement. Generator must provide a copy of the waiver to WM.

If the project does not meet any of the above exemptions, either (a) an asbestos survey and/or testing for ACM will be required, or (b) the materials will be managed as ACM, which will include additional fees and charges.

Certification

By signing below, the above-named contractor/generator certifies as follows:

- The information contained in this Certification is true and correct and the contractor/generator has complied with all applicable state laws and regulations;
- The waste materials do not contain asbestos-containing materials (ACM).

Furthermore, by signing below, the generator agrees to indemnify and save WM harmless from and against any and all liability, claims, fines, penalties, fees, and costs (including reasonable attorney's fees) that WM may be responsible for or pay out as a result of any misrepresentation in this Certification, including generator's failure to perform an asbestos survey (if required) or failure to disclose information or knowledge that the wastes included asbestos or ACM.
